

**TARGET
PHARMA**
PHARMACEUTICAL

PARAGET

COMPOSITION:

Each ml contains:

Trenbolone Enanthate.....	100mg
Trenbolone Acetate.....	50mg
Trenbolone Hexahydrobenzylcarbonate....	50mg
Oil Base.....	q.s.

Tren mix 200 is a combination of three esters of Trenbolone : Trenabolone Acetate,Trenbolone Enanthate & Trenbolone Hexahydrobenzylcarbonate. The presence of the acetate ester allows Tren mix 200 to display a rapid initial physiological response. The other two esters, which release at slower rates, prolong the physiological response with a relatively flat absorption curve over the duration of the injection life-cycle. It also has a great effect on promoting protein synthesis, as well as creating a positive nitrogen balance. It is an appetite stimulant and improves the conversion of proteins.In laboratory tests, it has been demonstrated that Trenbolone acetate increases protein and decreases fat deposition. It has proven to be an excellent product for promoting size and strength in the presence of adequate protein and calories,promotes body tissue building processes, and can reverse catabolism.
